

Usability Evaluation Insights & Recommendations

The usability evaluation provided valuable insights into how the prototype could better serve charities and improve the overall user experience. While the general structure and navigation were well received, the feedback highlighted key areas that need to align more closely with Brooklyn's requirements.

One of the most significant takeaways was the need to put more emphasis on resources for charities. The site should feel more like a hub for actionable tools and support rather than just a collection of static pages. To achieve this, key resources—such as funding guides, links to info pages, and CTAs need to be more prominent and easily accessible. Users should be able to: recognize the purpose of a page, quickly identify where to go for help and what steps to take next.

Another important point was the overuse of large static images. While visuals help create an engaging experience, oversized images were taking up space without adding much context. A better approach would be to implement **interactive galleries that pair images with relevant descriptions**, giving users a deeper understanding of the content while keeping pages more compact and efficient.

Key Areas for Improvement

- **Clearer page purpose** – Some users found it unclear what each page was meant to accomplish. Adding **brief introductions or tooltips** at the top of each page would help guide users by providing immediate context.
- **Better color contrast** – Certain sections blended together too much, making it harder for users to distinguish important elements. Adjusting the **color scheme and contrast** will improve readability and accessibility.
- **Stronger "Resource Hub" identity** – The site should immediately communicate that it is designed to support charities in a **practical and meaningful way**. Resource links should be **more prominent on the homepage**, rather than hidden in subpages.

By implementing these refinements, the platform will become **more intuitive, visually balanced, and purpose-driven**, making sure that charities feel supported the moment they land on the site.
